Summary

Computer Science graduate with project experience in full stack web development, machine learning concepts, and natural language processing. Built AI-powered web applications using Python, React, Flask, and the Google Gemini API, applying Agile development practices and RESTful API design. Seeking a software developer or junior engineer role to contribute practical project skills and strong analytical thinking.

Education

SR University — B.Tech in Computer Science GPA: **9.7 / 10.0** ([Transcript](#)) Nov 2022 – May 2026

- **Coursework:** Web Development, Machine Learning, Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Natural Language Processing

Experience

Python Full Stack Developer Virtual Internship — EduSkills Academy Oct 2024 – Dec 2024

AICTE – National Internship Portal, 10 Weeks

- Completed an AICTE-recognized 10-week virtual internship covering Python full stack development concepts including web frameworks, frontend integration, and application structure.
- Assessed through a final examination and awarded Grade E (Excellent, 80–89) by EduSkills Academy under the National Internship Portal initiative.

Technical Skills

Languages: Python, JavaScript, C, HTML, CSS
Web Development: React 18, Flask, Django, Bootstrap 5, Vite
Databases: SQL, MongoDB
Tools: Git, GitHub, VS Code, Antigravity, Google Gemini API
Concepts: Machine Learning, Natural Language Processing (NLP), TF-IDF, Generative AI, Data Structures and Algorithms, Object-Oriented Programming (OOP), RESTful APIs, Agile Development

Projects

Organic Buddy — AI-Powered Agricultural Recommendation System March 2026

React, Flask, Python, Google Gemini API, TF-IDF, NLP, RESTful APIs

- Developed a full stack web platform (React + Flask) using a TF-IDF NLP engine and Google Gemini API to map synthetic agricultural chemicals to organic alternatives and generate acre-scaled organic recipes.
- Designed an ROI Calculator for multi-year financial projections and a Chemical Impact Visualizer with Radar Charts to quantify environmental toxicity metrics across chemical comparisons.
- Exposed Flask backend functionality through RESTful API endpoints consumed by the React frontend, enabling modular and testable front-end/back-end communication.

FarmFund — Agricultural Financial Management System March 2025

Django, PostgreSQL, Bootstrap 5, Vercel, Python

- Engineered a responsive web application for farm-level financial management covering budgeting, income and expense tracking, KPI reporting, and crop-wise cost breakdown.
- Deployed on Vercel with a Django backend, PostgreSQL database, and Bootstrap 5 UI, delivering a fully functional financial management system end-to-end.
- Structured the project using an Agile iterative approach with version control via Git, maintaining a clean commit history and modular codebase throughout development.

Pharmacy Billing System July 2023

C, File I/O, Data Structures

- Designed a console-based billing and inventory management system in C supporting medicine records, bill generation, sorting, and sales reporting.
- Validated each module through manual unit testing with a peer reviewer; iteratively debugged based on terminal outputs, reducing manual billing steps by an estimated 30%.

Certifications

NPTEL — Elite + Gold: Theory of Computation [Verify](#) Sep 2024
Coursera — Introduction to Git and GitHub (Google) [Verify](#) Mar 2024
Microsoft Certified: Azure AI Fundamentals (AI-900) [Verify](#) Mar 2024
Coursera — Data Structures and Algorithms Specialization (UC San Diego) [Verify](#) Oct 2023
